

Sales performance is anchored by a \$2.45M revenue base

Dashboard period ending 31 December 2026 • 2,000 orders across 2026.

TOTAL REVENUE

\$2,452,084

The commercial base to protect.

ORDERS

2,000

Orders recorded in the source workbook.

QUANTITY SOLD

5,552

Units across the order base.

AVERAGE ORDER VALUE

\$1,226

Revenue divided by total orders.

READOUT

The headline is scale with a clear base: \$2.45M in revenue generated through 2,000 orders. The average order value of \$1,226 gives the team a useful commercial lens alongside volume, while quantity sold shows the base is built from 5,552 units rather than a small number of isolated transactions.

Source note. Prepared from the supplied dashboard image and Excel workbook; displayed figures are rounded where noted, while calculations use workbook detail.

Performance is broad-based, but the mix is concentrated

Computers generate more than half of revenue, while North and Central are the two largest regions. The opportunity is not a single-market story: contribution is distributed across five regions, but the product engine is more concentrated.

Revenue by product category and region. Product categories appear first, followed by regional contribution; values are exact workbook amounts.

LENS	LEADER	NEXT READ
Product	Computers · \$1.35M	Monitors · \$527K
Region	North · \$562K	Central · \$557K

November was the strongest month; June and April also broke through

Monthly revenue is uneven, with a clear late-year peak and a second cluster of strong spring and summer months. The spread between the November high and July low makes timing and repeatable commercial motions worth investigating.

Monthly revenue trend. November leads at \$274K; June reaches \$259K, April \$241K, March \$237K, and September \$233K.

SIGNAL	MONTH	REVENUE
Peak	November	\$274K
Softest	July	\$151K
Second softest	May	\$154K

Online leads the channel mix, with corporate sales close behind

The channel picture is diversified, but Online and Corporate Sales together account for the majority of revenue. Retail Store remains a substantial third contributor, while Marketplace is the smallest channel and the clearest soft spot to diagnose.

Revenue by sales channel. Online is the largest contributor; Marketplace is the smallest.

CHANNEL	REVENUE	READOUT
Online	\$792K	Largest
Corporate Sales	\$719K	Close behind
Retail Store	\$631K	Material third
Marketplace	\$310K	Smallest

Top products point to a premium-computing growth engine

The top five products are led by high-value computing products, not long-tail accessories. Gaming Laptop is the clear product leader, and four of the five leading products are tied directly to computing or display demand.

Top five products by revenue. Exact workbook values are shown in the chart labels.

PRODUCT	REVENUE	POSITION
Gaming Laptop	\$433K	Clear leader
Laptop Air 13	\$274K	Second
Laptop Pro 14	\$263K	Third
All-in-One PC	\$255K	Fourth
Ultrawide Monitor	\$191K	Fifth

Protect the core, improve the soft spots

The dashboard points to a focused commercial agenda: defend the strongest engines, learn from the strongest months, and diagnose softness before reaching for broad incentives.

01 Keep the core at the center of planning

Prioritize Computers, North, Central, Online, and Corporate Sales in commercial planning and performance conversations.

02 Investigate the momentum months

Review what drove November, June, April, March, and September, then identify the winning motions that can be repeated.

03 Diagnose the soft spots before discounting

Start with July and May, Marketplace, and lower-value categories. Use evidence before adding broad incentives.

04 Pair discount quality with the next review

The workbook includes discount at order level. Review it alongside revenue and order mix to distinguish healthy growth from price-led volume.

Use the dashboard interactively. The dashboard supports slicing by region, product category, sales channel, customer type, and date timeline. The next review should use those cuts to test the hypotheses above.

Metric definitions and source notes

These definitions keep the headline metrics consistent across the dashboard, workbook, and future stakeholder reviews.

METRIC	DEFINITION	SOURCE BASIS
Total revenue	Sum of Revenue.	Workbook detail
Total orders	Count of Order ID, with each Order ID representing one order.	Workbook detail
Quantity sold	Sum of Quantity.	Workbook detail
Average order value	Total Revenue divided by Total Orders.	Derived metric
Source period	Dashboard updated through 31 December 2026; workbook records 2,000 sales orders dated in 2026.	Dashboard + workbook
